

Engineering in the Age of AI

Why Architecture and Responsibility Matter More Than Ever | Booksy Webinar

AI can generate code in seconds - but building reliable, secure, and scalable systems is still a human responsibility. As automation reshapes software development, the role of engineers is shifting from writing code to designing architectures, evaluating trade-offs, and owning the consequences of technical decisions. In this session, we'll explore how AI changes everyday development - and why architecture, critical thinking, and accountability matter more than ever.

THE DETAILS

Host: Piotr Bajsarowicz & Hubert Karwicki (Senior Software Engineers @ Booksy)

Language: English

When: 26th of March 2026, 4 PM CET

During the session, we will also share details about our upcoming **Early Careers Programme**.
